

Atty. Dkt. No. 1423-9  
Ser. No. 09/428,508

IN THE SPECIFICATION:

Page 2, line 17.

---

CP Typically, each tyre's central axis is offset from vertical at a batter angle ranging from 10° to 20°. Use of this angle has been observed in practice to provide ease of construction of the retaining wall whilst still retaining the advantages of the inclination of the wall.

---

Page 6, line 33.

---

CA As above, the batter angle of the so-formed wall typically ranges from 10° to 20° offset from the vertical.

---
